The following agreement has been approved by and entered into between

Prof. Daniel R. Grayson, Mathematics Department, University of Illinois at Urbana-Champaign, 1409 W. Green Street, Urbana, IL 61801, USA and
Prof. Eric Friedlander, Department of Mathematics, Northwestern University, Evanston, IL 60208-2730, USA
(hereinafter called the Editors) on the one part and Springer-Verlag GmbH Berlin Heidelberg (hereinafter called Springer-Verlag), acting in cooperation with Springer-Verlag New York LLC. and Springer-Verlag Tokyo Inc., on the other part.

§ 1 Rights Granted
As a result of previous negotiations, the Editors, in cooperation with further Authors, undertake to prepare for publication by Springer-Verlag a work provisionally entitled:

Handbook of K-Theory
(in 2 volumes)

comprising approximately 1086 printed pages, including a maximum of 5 illustrations.

The Editors hereby grant and assign to Springer-Verlag the sole right to print (including printing on demand), publish, and sell throughout the world the said work and parts thereof, including all revisions or versions and future editions thereof and in any medium, such as in its electronic form (offline, online), as well as to translate, print, publish, and sell the work in any foreign languages and throughout the world. Springer-Verlag will take, either in its own name or in that of the Editors, any necessary steps to protect these rights against infringement by third parties. It will have the copyright notice inserted into all editions of the work according to the provisions of the Universal Copyright Convention (UCC) and dutifully take care of all formalities in this connection, either in its own name or in that of the Editors.

§ 2 Delivery and Acceptance of the Work
The Editors agree to deliver to Springer-Verlag not later than September 2004 the complete manuscript in electronic form (LaTeX) including the laser print-out (final one to one print out of the files) as well as the original material for all illustrations, ready for reproduction.

The Editors, in cooperation with the Authors, are responsible for correctness of the manuscript, including content, language, and formal presentation. The manuscript meets the terms of this agreement only if it satisfies the agreed stipulations as to form, content, and size.

Springer-Verlag is entitled to carry out editorial changes on the manuscript within the usual limits. This is intended especially to enhance the uniform overall organization and form of the work. Any significant changes in content require the approval of the Editors.

The Table of Contents for the entire Handbook will occur at the beginning of each volume. The Index for the entire Handbook will occur at the end of each volume.
The costs for special copyediting beyond those for the normal manuscript preparation for typesetting will be borne by the Editors and be deducted from the royalties as stated in point 6 below. The Editors, in cooperation with the Authors, warrant that the work is original except for such excerpts from copyrighted works (including illustrations, tables, and text quotations) as may be included with the permission of the copyright holder and author thereof, in which case(s) the Editors are required to indicate the precise source. Springer-Verlag has the right to permit others to use individual illustrations within the usual limits.

The Editors, in cooperation with the Authors, warrant that the work has not heretofore been published in whole or in part, that it contains no libelous statements and does not infringe on any copyright, trademark, patent, statutory rights or proprietary rights of others; and that they will indemnify Springer-Verlag against any cost, expenses or damages for which Springer-Verlag may become liable as a result of any breach of this warranty.

§ 3 Control of Publication
Springer-Verlag will undertake the production and distribution of this work at its own expense and risk. The final determination of the number of copies is at the discretion of Springer-Verlag. Springer-Verlag will ensure a good and suitable layout and printing. Springer-Verlag will set or alter the list-price and promote the work as it considers most appropriate to promote sales.

Springer-Verlag is entitled, depending on the market and the demand, to print the edition in installments. It is also entitled to pulp a portion of the printrun without previously notifying the Editors. In this case, however, Springer-Verlag is required to retain a sufficient number of copies of the work and to continue promoting it.

§ 4 Corrections and Index

and Authors

The Editors will proofread the page-proofs and check the illustrations. Proofs are sent to enable Editors and Authors to check that their manuscripts have been properly set in type and to allow them to correct any typographical or draftsmen’s errors.

The costs resulting from making other changes exceeding 10% of the total costs of typesetting (or reproduction in the case of illustrations) will be charged to and paid for by the Editors or by the Author responsible for the changes.

The Editors will prepare an index and give their approval for printing. The corrected proofs and index shall be returned to Springer-Verlag without undue delay. The Editors’ approval for printing is considered given if they do not respond within a suitable period of time after receiving the proofs.

Proof-reading is not necessary if a camera-ready manuscript is delivered.

§ 5 Editors’ copies
The Editors are together entitled to receive 26 (see §11) copies of the published work free of charge. Authors may obtain additional copies for their personal use at a discount of 33 1/3% off the list-price directly from Springer-Verlag.

and Authors

The Editors and Authors
Furthermore, the Editors are entitled to purchase for their personal use (directly from Springer-Verlag) other books published by Springer-Verlag at a discount of 33 1/3% off the list-price. *
Resale of such copies or of free copies is not permitted.

§ 6 Royalties
The Editors receive a joint royalty of
0 %
for each sold and paid copy.
The same royalty becomes due if Springer-Verlag decides to publish the work, or part of the work, in electronic form.
In the case of sales to industry or other bulk sales of non-net priced special editions, the Editor’s royalty will be 0 % of the net proceeds of such sales.
Accounts will be settled annually in April for the preceding year. Free copies which are provided by Springer-Verlag for the purposes of review, promotion, sample or otherwise free of charge are not subject to royalty payments. This also applies to copies that are damaged and cannot be sold.
The Editors will decide together how the royalties are to be divided between them.
The Editors are responsible for the taxation of the royalties.
Royalty payments to Editors who are not residents of the Federal Republic of Germany are subject to the regulations of the respective Double Taxation Agreements and have to be reported by Springer-Verlag to the relevant tax authorities.

§ 7 Competing Works
For the duration of the validity of this contract, the Editors agree not to publish excerpts from this work or any other work similar to this one in the presentation of the whole or parts of its content, which might thus represent a rival publication to this one, or to collaborate on any other such work with another publisher without previously obtaining the permission of Springer-Verlag.

§ 8 Subsidiary rights
Springer-Verlag has the sole right to grant licences for special editions of the work or of parts thereof in the original or abridged form (e.g., paperback, book club, or microfilm editions, inclusion in collected works or in an anthology, advance printing or reprints in periodicals, etc.), as well as licences for translation into other languages and for use on radio, television, and audiovisual products as well as for electronic data processing (including programming, storage and transmission to other electronic data records). Any licence fees from the sale of such rights will be equally divided between the Editors and the Authors on the one hand and Springer-Verlag on the other. The Editors and the Authors will decide together how the royalties are to be divided between them.
Any publisher’s proceeds from subsidiary rights managed by national copyright organizations are the sole property of Springer-Verlag.

* This does not apply to the following works:
HAGER:
LANZKOT-DÖRNSTEIN:
Handbuch der Pharmazeutischen Praxis
Zahlenwerte und Funktionen aus Naturwissenschaften und Technik
Numerical Data and Functional Relationships in Science and Technology
Springer-Verlag reserves the right to incorporate forthcoming titles into this list of exceptions.
The printing plates or films of the illustrations prepared at the expense of Springer-Verlag remain the exclusive property of Springer-Verlag.

§ 9 New Editions
In the event of subsequent editions, they will be published by Springer-Verlag under the same terms as stated herein.
Once notified by Springer-Verlag that a new edition is deemed necessary, the Editors agree to deliver an updated manuscript, ready for printing, together with the material for any new illustrations, within nine months of such notification. Substantial changes in the nature or size of the work require the approval of Springer-Verlag.
If the Editors, for whatever reason, are unwilling or unable to submit an updated manuscript or do not do so within a period of nine months after being notified by Springer-Verlag that a new edition is necessary, then Springer-Verlag is entitled to reprint the previous edition, or to designate one or more individuals to prepare this and all future editions. In this case, the Editors do not participate in preparing future editions. Furthermore, the Editors or their beneficiaries receive 50% of the royalties agreed to in point 6 for the first new edition. The Editors or their beneficiaries thus relinquish all claims to royalties from any further versions or editions of the work.

§ 10 Entire Agreement
This agreement shall be deemed to be made under and shall be interpreted in accordance with the laws of the Federal Republic of Germany.

§ 11 Additional Provisions
11.1 A number of collaborating Authors listed in Attachment 1 are involved in the writing of various chapters. It is understood that the nature and extent of their respective contributions are the object of separate agreement between each of them and the Editors. Springer will make available one copy of the Work and one further Springer book of their choice for each of these Authors, and 2 copies of the Work to each of the Editors.

11.3 Springer-Verlag and the Editors agree to examine sales levels during the third year; if it is less than 20 sales in 6 months, or if Springer-Verlag and the Editors decide differently based on consulting with each other, the Editors will be allowed to post the full book, as well as individual chapters, on the Internet in electronic form.

To signify their agreement to the terms outlined herein, all parties have signed and exchanged this triplicate contract.

The Editors

Daniel R. Hayton 4/7/05

Springer-Verlag GmbH
Berlin/Heidelberg

Pl./Kst. Mathematics Editorial I/Dr. Catriona M. Byrne/sd/September 28, 2004
Addendum 1 to the Publishing Agreement
between
Prof. Daniel K. Grayson, Mathematics Department, University of Illinois at Urbana-Champaign, 1409 W. Green Street, Urbana, IL 61801, USA
and
Prof. Eric Friedlander, Department of Mathematics, Northwestern University, Evanston, IL 60208-2730, USA
and Springer-Verlag

List of collaborating authors

- Paul Balmer, Witt groups
- Gunnar Carlsson, Deloopings in Algebraic K-theory
- Joachim Cuntz, Bivariant K- and cyclic theories
- Eric Friedlander and Mark Walker, Semi-topological K-theory
- Eric Friedlander, Motivic Complexes of Suslin and Voevodsky
- Thomas Geisser, Motivic cohomology, K-theory and topological cyclic homology
- Henri Gillet, K-theory and intersection theory
- Alexander B. Goncharov, Regulators
- Daniel R. Grayson, The motivic spectral sequence
- Lars Hesselholt, K-theory of truncated polynomial algebras
- Bruno Kahn, La conjecture de Milnor (d’après V. Voevodsky)
- Bruno Kahn, Algebraic K-theory, algebraic cycles and arithmetic geometry
- Max Karoubi, Bott periodicity in topological, algebraic and Hermitian K-theory
- Marc Levine, Mixed motives
- Wolfgang Lück and Holger Reich, The Baum-Connes and the Farrell-Jones Conjectures in K- and L-theory
- Alexander S. Merkurjev, Equivariant K-theory
- Stephen Mitchell, K(1)-local homotopy theory, Iwasawa theory and algebraic K-theory
- Amnon Neeman, The K-theory of Triangulated Categories
- Jonathan M. Rosenberg, K-theory and geometric topology
- Jonathan M. Rosenberg, Comparison between algebraic and topological K-theory for Banach algebras and C*-algebras
- Chuck Weibel, Algebraic K-theory of rings of integers in local and global fields
- Bruce Williams, Quadratic K-theory and Geometric Topology
