Math 347 - Fall 2015
Guidelines for homework

To get full credit on homework problems, your solutions should satisfy the following criteria.

1. Your solution must provide a correct answer, with proof, and all the important logical steps in the proof must be present and adequately explained.

2. It must be easy to understand the meaning of each sentence and paragraph, and to locate each step of the argument. Assumptions must be clearly stated.

3. Your solution should be concise: every sentence should advance your reader’s understanding of the argument in some way.

4. The major ideas should be explained in complete English sentences. Symbols should only be used to condense complex relationships into a readable format.
