1. (3 points) Find the average value of the function $f(x) = \frac{x^2}{\sqrt{2x^3 + 9}}$ on the interval $[0, 2]$.
Simplify your answer.

2. Let \mathbf{R} be the finite region bounded by the graphs of the following functions.

$$y = -2x + 14$$

$$y = \frac{20}{x}$$

Set up, but do not evaluate, definite integrals which represent the volumes of the following solids.

- (a) (3 points) The volume of the solid with base \mathbf{R} for which the cross-sections perpendicular to the x -axis are squares.

(b) The volume of the solid formed when \mathbf{R} is revolved around the line $x = 7$. Set up the integrals for this volume in the following two ways.

i. (2 points) Integrate with respect to x .

ii. (2 points) Integrate with respect to y . (Use different integrands in parts *i* and *ii*.)
