1. Problem 8-26 of Lee on page 203.

2. Problem 8-28 of Lee on page 203.

3. Problem 20-5 on page 536.

4. Problem 20-4 on page 536.

5. (a) Combine Problems 1 and 2 to show that the Lie algebra of $\text{SL}_n \mathbb{R}$ is the subset of $M_n(\mathbb{R})$ consisting of matrices of trace 0.

   (b) Explain how the result in (a) is consistent with your answer to Problem 4.

6. Let $V$ be a $\mathbb{R}$-vector space with basis $\{e_1, e_2, ..., e_m\}$ and consider the dual basis $\{\alpha^1, \alpha^2, \ldots, \alpha^m\}$ of $V^*$. Let $W$ be another $\mathbb{R}$-vector space with basis $\{f_1, f_2, ..., f_n\}$ and dual basis $\{\beta^1, \beta^2, \ldots, \beta^n\}$ for $W^*$. Suppose $T: V \to W$ is a linear transformation. Let $A$ be the matrix of $T$ and let $A^*$ be the matrix of $T^*: W^* \to V^*$ with respect to our chosen bases. Prove that $A^*$ is just the transpose of $A$.

7. Problem 11-1 of Lee on page 299.
