Course summary: You go to four talks during the semester, and report on them.

No restrictions (they can be at UIUC or elsewhere). They should be somewhat related to mathematics, mathematics education, mathematics administration, etc.

In normal semesters, this number is twelve instead of four. However, there are fewer talks available than is normal.

The details: By the end of the semester, you should do the following:

1. Attend at least four talks
   (a) Fill out a Talk Summary for each talk either during, or shortly after, attending the talk
   (b) Make sure you fill out every question!

2. Near the end of the semester, fill out a Reflection Sheet summarizing all four talks

3. Turn in five things: the four Talk Summaries, and one Reflection Sheet

(See attached files for Talk Summary and Reflection Sheet templates.)

Any and all talks count for this — they can be regular seminars, graduate student seminars, colloquia, etc.
